

MITROZ TECHNOLOGIES

Healthcare Technology Division

Engineering partnerships across regions.

Who We Are

Mitroz Technologies is a software engineering company specializing in medtech, healthcare IoT, and complex operational platforms. With 12+ years of experience and 150+ projects delivered across 8+ countries, the team brings clinical domain depth alongside strong technical fundamentals. Mitroz operates as a long-term engineering partner, not a one-time vendor.

Industry Understanding & Strategic Vision

Medtech software needs more than generic app development.

Medical device products need software that connects device behavior, clinical workflows, and complex regulatory standards into a single unified experience. At Mitroz, we bridge the gap between engineering precision and human-centric medical practice, ensuring data integrity at every touchpoint.

SYSTEM CONNECTIVITY

Connecting your product to the tools, platforms, and standards your users already rely on.

CLINICAL DATA

Patient records, test results, & diagnostic data handled with accuracy & compliance from day one.

DEVICE WORKFLOWS

Software built around how your device actually behaves, not around generic app patterns.

LEGACY REBUILDS

Replacing outdated systems without breaking the specialist workflows your team depends on.

Connected Medical Device Integration

HL7 FHIR & DICOM Interoperability

ABDM & DPDP Ready

🛡️ Digital Health Compliance

ABDM-ready architecture, DPDP-aligned data handling, and EHR Standards for India-compliant software built for secure healthcare operations.

🔗 ABDM & Health Data Integration

Seamless integration with ABHA, Health Information Exchange (HIE-CM), and HL7 FHIR-based interoperability across connected healthcare systems.

Built For Teams With Real Product And Workflow Complexity.

Healthcare IoT Startups

Securing patient data at the edge while maintaining ultra-low latency for real-time monitoring and alerting.

Medical-Device Manufacturers

Streamlining hardware-software integration with rigorous regulatory audit trails and safety-critical versioning.

Diagnostic Equipment Companies

Optimizing high-throughput data processing pipelines for laboratory imaging and molecular analysis systems.

Certification-Heavy Healthcare Businesses

Automating compliance workflows for HIPAA, GDPR, and MDR to accelerate time-to-market in complex regions.

Legacy Healthcare Software Teams

Modernizing monolithic infrastructure into scalable microservices without disrupting critical clinical operations.

Healthcare Platform Operators

Unifying fragmented health data ecosystems into a singular, high-performance orchestration layer for enterprise care.

Engineering capabilities behind every product.

TRUSTED BY INDUSTRY INNOVATORS

Engineering services for medtech product teams

Medical Device Software Development

SaMD development adhering to ISO 13485 and IEC 62304 standards with rigorous quality assurance.

IoT App Development

Connecting medical sensors and wearable tech to enterprise backends for real-time monitoring.

Clinical Workflow Software

Scalable, HIPAA-compliant ecosystems built on modern microservices architectures.

HL7 and DICOM Integration

Seamless data exchange between imaging systems, EHRs, and secondary platforms.

Legacy Product Modernization

Revitalizing monolithic healthcare apps into scalable, secure, cloud-native microservices.

Mobile and Tablet Healthcare Apps

Intuitive mobile solutions for patient monitoring and physician mobility.

Our Healthcare Product Development Process

1

Discovery & Research

Market analysis and stakeholder alignment.

2

UIUX Design

User-centric medical interfaces and flows.

3

Development

HIPAA-compliant, scalable engineering.

4

Testing

Rigorous QA and medical safety audits.

5

Deployment

Cloud infrastructure and global rollout.

One product experience often depends on several engineering layers.

The Connected Ecosystem

Our medical technology stack isn't just about the hardware; it's a vertically integrated system designed to ensure precision at every junction. From physical telemetry to user-facing insights, every layer reinforces the integrity of clinical outcomes.

HIPAA Compliant

End-to-end encryption across all four layers of the engineering stack.

Ultra-Low Latency

Real-time data propagation from Device Layer to Product Experience.

Open Standards

Built on HL7 and FHIR protocols for seamless clinical integration.

Healthcare Device Experience Platform

OVERVIEW

Designed a tablet-based healthcare application focused on improving usability, accessibility, and operational efficiency for high-stakes clinical environments.

KEY CONTRIBUTIONS

UX Design

Interface Modernization

Workflow Optimization

Healthcare Dashboard

Tablet Application Design

Faster Test Setup
Reduced clinician configuration time per session

Simplified Navigation
Fewer steps to complete a diagnostic workflow

Calibre Smart Mask App

OVERVIEW

Designed a mobile application for an IoT-enabled Smart Mask ecosystem, enabling users to monitor air quality, respiratory health metrics, and real-time safety alerts through an intuitive and data-driven mobile experience. The solution focused on simplifying complex health data while improving accessibility and user engagement

KEY CONTRIBUTIONS

Mobile UX Design

Flow Design

UI Design

Real-Time Alerts

Instant respiratory and air quality notifications

Higher Engagement

Increased daily active usage post-launch

Hospital Room Management Platform

OVERVIEW

Designed a smartwatch-first application focused on simplifying room allocation, task visibility, and operational coordination through an intuitive wearable experience. The solution enabled users to access critical information quickly, reduce dependency on mobile devices, and improve workflow efficiency through real-time updates and streamlined interactions.

KEY CONTRIBUTIONS

Wearable Application Design

Workflow Optimization

Faster Task Access

Critical room allocation and available directly from the smartwatch interface.

Improved Efficiency

Reduced friction in daily coordination through simplified navigation and real-time status visibility

Other Developed Software

Zenith Certification Platform

Designed a tablet-based healthcare application focused on improving usability, accessibility, and operational efficiency for high-stakes clinical environments.

-  **Faster Test Setup**
Reduced clinician configuration time per session
-  **Simplified Navigation**
Fewer steps to complete a diagnostic workflow

Why Healthcare Organizations Partner With Us.

Diagnostic Software Modernization

Elevating legacy diagnostic tools with high-performance real-time visualization and cloud-native architecture.

Connected-Device Experience

Seamless IoT integration for medical hardware, ensuring 100% uptime and low-latency data synchronization.

Healthcare Data Awareness

HIPAA-compliant data pipelines designed for massive scale, maintaining the highest standards of integrity and security.

Workflow-Heavy Platform Design

Optimized UX for clinicians and technicians, reducing cognitive load and accelerating medical decision-making.

Engineering That Stays Accountable

Rigorous testing cycles and transparent reporting ensure that every line of code meets strict regulatory requirements.

Compact, Senior-Minded Team

Direct access to elite medtech specialists. No juniors, no bloat—just senior expertise dedicated to your mission.

Built for Compliance

SOC2 Type II & HIPAA Certified Processes

FDA Class II & III Ready Architectures

IEC 62304 Compliant Software Lifecycle
